

Sleepless in headgear?

Comfort that new smile with a good night's rest from an Open Spaces Pillow.

Recently you made an investment into someone's new smile. Comfort and protect that smile during this transitional phase with a new pillow from Open Spaces, designed especially for orthodontic and dental patients.

This unique pillow allows the user to sleep peacefully and comfortably without applying pressure to the face or jaw.

The pillow is made from soft, no-allergenic fiberfill with a smooth poly-cotton covering.

It fits into a standard pillow case or can be used without a pillow case. Machine washable.

My daughter used the Open Spaces Pillow and it really helped with her adjustment to headgear. It helps face down and side sleepers make the adjustment to sleeping with headgear. The cut out area in the pillow keeps the facebow from pressing onto the patient's face during sleep.
